Dear Hiring Manager

I am writing to apply for the Full-Stack Developer position with a focus on front-end development. I am a Computer Science student at the Royal University of Phnom Penh with hands-on experience building responsive and user-friendly web applications, including an e-commerce platform and an internship platform. I focus on delivering smooth, interactive front-end experiences while integrating APIs for dynamic content.

On the back end, I developed RESTful APIs to handle authentication, product and order management, and database operations. I also deployed the e-commerce backend on Render and the frontend on Vercel, configuring environment variables and CORS to support both local and production environments. This experience gave me a strong understanding of full-stack workflows from client to server.

I am eager to bring my skills in front-end development, API integration, and full-stack collaboration to your team. My ability to combine clean UI design with functional back-end logic, along with teamwork and communication skills, allows me to contribute efficiently to real-world projects.

sincerely.

Oeun Nuphea
